

October 23, 2012

A test was conducted on irrigated peanuts using a biostimulant from Agro Logic, LLC called "Over The Top Peanuts". It was applied on a Georgia 06 variety on day 70 at 1 quart per acre with 20 gals. of water.

The field was harvested on September 26, 2012. I and the individual who applied Over The Top Peanuts were both harvesting the peanuts. We concluded that from the visual difference we could see and from the additional peanuts we were dumping into the wagons that the increase in yield was from 200 to 400 pounds per acre. In addition to yield increase, we had a 1 to 2 point increase in grade.
